

CITIWATER
TOWNSVILLE

Supporting

creektocoral

EVAPORATION

Water evaporates into the atmosphere from rivers, streams, lakes and oceans, continuing the water cycle.

PRECIPITATION

Raindrops fall from the clouds

RECYCLING

Treated water is used to irrigate parks and gardens, which helps to save drinking water.

Discover THE WATER CYCLE with HOP the Frog

SEWERAGE MANAGEMENT

Citiwater pumps sewerage to treatment stations where the water is purified.

STORMWATER MANAGEMENT

Rubbish is filtered out of the stormwater, collected by gutters and drains, before it enters bays and oceans.

WATER COLLECTION

Water is collected in waterways, dams and bulk storage reservoirs

CATCHMENT MANAGEMENT

NQ Water controls the contamination of the water by managing weeds, preventing algae blooms and erosion entering the stored water. Citiwater can then purchase this water for distribution.

WATER SUPPLY TO TOWNSVILLE (USE)

Citiwater supplies water via pipelines to all residents of Townsville.

WATERWAYS

These include rivers, streams, lakes, bays and oceans
